

TACTICAL BOMB DISARMAMENT MANUAL

4-SECTOR FIELD MANUAL & ARDUINO BREADBOARD PROTOCOLS

MISSION BRIEFING: This field document contains certified ordnance disposal guidelines for all **4 tactical combat sectors**. Operatives utilizing the physical breadboard hardware interface must inspect the **Serial Number**, active **LED status bank**, and colored wire harness to deduce and sever the correct circuit sequence within the **2-minute global countdown**.

SECTION 1: BREADBOARD HARDWARE PINOUT & WIRE COLOR CODES

WIRE COLOR	PIN / KEY	CIRCUIT ROLE	FUNCTION & DESCRIPTION
RED	Pin 1 / Key [1]	Primary Power Feed	Carries high-voltage core charge; cuts generator loop.
GREEN	Pin 2 / Key [2]	Chemical Neutralizer	Flushes coolant lines and disables reactant coils.
YELLOW	Pin 3 / Key [3]	Timer Logic Bypass	Drains discharge capacitor and disarms logic relays.
BLACK	Pin 4 / Key [4]	Terminal Ground	Isolates internal coils and prevents circuit feedback.
BLUE	Pin 5 / Key [5]	Microprocessor Clock	Freezes microprocessor frequency and stops ignition pulse.
WHITE	Pin 6 / Key [6]	Containment Stabilizer	Locks chamber pressure valves and seals radioactive core.

SECTION 2: ON-RAIL COMBAT & 3-BUTTON CIPHER OVERRIDES [C, V, SPACE]

- **Lock-On Engagement:** Operative automatically moves on-rail and locks aim onto **2 to 3 distant, scattered hostiles per sector** spaced across long corridor sprints.
- **Strict Stopping Rule:** Forward movement ceases when an enemy is targeted. You **CANNOT advance** until the hostile is neutralized.
- **3-Button Combat System:** When locked onto a target, a randomized sequence is generated from strictly 3 buttons:
Buttons: **[C: Circuit C]**, **[V: Circuit V]**, and **[SPACE: Kinetic Trigger]** (or click on-screen badges).
- **Tightening Reaction Windows:** Input the correct sequence before the countdown expires:
Sector 01: 1–2 buttons • 3.0s → 2.6s → 2.4s reaction window
Sector 02: 2 buttons • 2.4s → 2.2s → 2.0s reaction window
Sector 03: 2–3 buttons • 2.0s → 1.8s → 1.7s reaction window
Sector 04: 3 buttons (Guards) / 4 buttons (General Malikov Boss) • 1.8s → 1.6s → 2.4s (Boss Showdown!)
- **Wrong Key Penalty:** Entering an incorrect cipher applies an error buzz and subtracts **-0.25s** from the reaction timer.
- **Instant Failure on Timeout:** If the reaction timer hits 0.0s, the hostile fires a lethal shot for **immediate mission failure**!

SECTION 3: PROCEDURAL SECTOR DISARMAMENT PROTOCOLS & LOGIC MATRICES

NOTICE: Bomb Serial Numbers and LED banks are procedurally randomized on every deployment. Apply the priority rules below to deduce the active sequence.

SECTOR 1: COASTAL INFILTRATION YARD (MK-I FUSE)

- **Priority Decision Matrix:**
 - Rule 1: If Serial ends with an **ODD digit** AND **BLUE LED is ON** → Cut **BLUE [5]** then **YELLOW [3]**.
 - Rule 2: Else if **RED LED is ON** AND **GREEN LED is OFF** → Cut **GREEN [2]** then **RED [1]**.
 - Rule 3: Else if Serial ends with an **EVEN digit** → Cut **RED [1]** then **BLACK [4]**.
 - Rule 4 (Fallback): Otherwise → Cut **WHITE [6]** then **YELLOW [3]**.

SECTOR 2: SUBTERRANEAN BUNKER & SERVERS (MK-II CAPACITOR)

- Priority Decision Matrix:
 - Rule 1: If both RED & GREEN LEDs are ACTIVE → Cut YELLOW [3] then WHITE [6].
 - Rule 2: Else if Serial ends with an EVEN digit AND YELLOW LED is ON → Cut BLACK [4] then GREEN [2].
 - Rule 3: Else if BLUE LED is ACTIVE (ON) → Cut RED [1] then BLUE [5].
 - Rule 4 (Fallback): Otherwise → Cut WHITE [6] then BLACK [4].

SECTOR 3: RESEARCH SILO & CATWALKS (MK-III 2-STAGE BIO-CHEMICAL CORE)

- 2-Stage Logic Matrix:
 - STAGE 1 (Valve Seal): If BLUE LED is ON and RED LED is OFF → Cut WHITE [6]; otherwise cut YELLOW [3].
 - STAGE 2 (Neutralizer Line): If Serial contains letter 'V', 'C', or 'X' → Cut GREEN [2]; otherwise cut BLACK [4].

SECTOR 4: FORTRESS COMMAND CITADEL (MK-IV 2-STAGE QUANTUM RESONATOR - GRAND FINALE)

- 2-Stage Logic Matrix:
 - STAGE 1 (Grid Decouple): If EXACTLY 3 or 4 LEDs ARE ACTIVE → Cut RED [1]; else if EXACTLY 2 ACTIVE → Cut YELLOW [3]; otherwise cut BLUE [5].
 - STAGE 2 (Grounding Discharge): If Serial ends with an EVEN digit → Cut BLACK [4]; otherwise cut WHITE [6].

SECTION 4: QUICK ENGAGEMENT & SECTOR PROTOCOL OVERVIEW

SECTOR	SECTOR NAME	HOSTILES	COMBAT CIPHER (QTE)	PUZZLE SYSTEM	STAGES
Sector 01	Coastal Infiltration Yard	2–3 Scattered Scouts	1–2 Keys (3.0s → 2.4s)	Tactical Fuse Matrix	2 Wires
Sector 02	Subterranean Bunker	2–3 Distant Guards	2 Keys (2.4s → 2.0s)	Circuit Logic Matrix	2 Wires
Sector 03	Research Silo	2–3 Catwalk Foes	2–3 Keys (2.0s → 1.7s)	Bio-Chemical Pressure	2 Wires
Sector 04	Fortress Command Citadel	2–3 Foes + BOSS	3–4 Keys (1.8s → 2.4s Boss)	Quantum Resonator (Finale)	2 Wires

CRITICAL SAFETY NOTICE: Cutting an incorrect wire applies an immediate -20 SECONDS PENALTY to the global 2-minute round timer. If the quick-draw reaction timer hits 0.0s or the global round clock reaches 00:00.00, catastrophic detonation/elimination occurs immediately.
